

EARTH-CHAIN

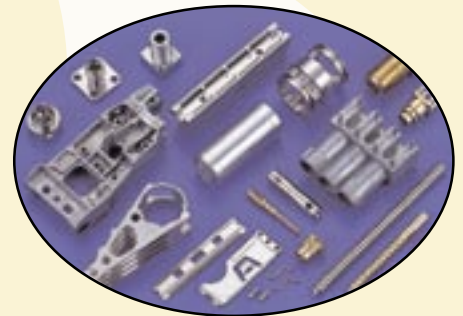

sPINner Magnetic Deburring

Applications

- medical parts - swiss turned
- drilled or threaded parts
- machined or stamped parts

Benefits

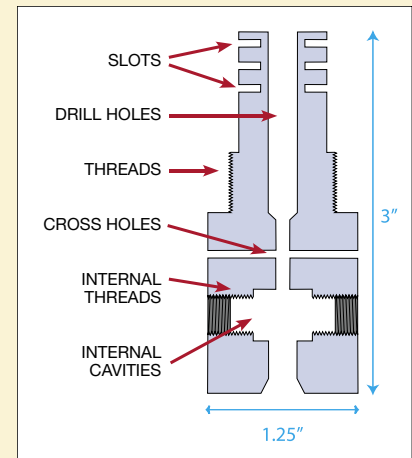

- costs less than hand deburring
- deburr parts faster & better
- keeps part quality consistent

See a video of the sPINner machine batch deburring parts like these at: www.earthchain.com

The sPINner utilizes a rotating magnetic plate that excites the special stainless steel pin media. The rapidly changing polarity of the pins makes them whirl rapidly, creating deburring action even in internal part cavities.

You can increase or decrease the power using the programmable control, or by selecting larger or smaller media. Parts are demagnetized at the end of the deburring cycle. Pin media is reusable for years.

The sPINner deburrs external and internal part geometry.

Model No.	Dim. L x W x H	Tank Size L x W	Power	Amps	Weight
EDH-728	19" x 19" x 37"	11" x 11"	220V	5	160 lbs.
EHD-735	23" x 26" x 34"	15" x 16"	220V	10	220 lbs.
EHD-750	29" x 30" x 36"	21" x 23"	220V	15	385 lbs.

Send us your sample parts!

We will test your parts in the sPINner for free, and send you a full report with test results.
